

ICPI Producer Declaration Form 2019-20

Confidential

TO: Charles McGrath, ICPI

Fax: 703-657-6901 or scan signed document and email to cmcgrath@icpi.org by **May 1, 2019**.

ICPI Producer dues is a machine-based model that assesses production on paving units only. Dues are based on the percentage of annual machine cycles committed to making paving units in excess of 5000 psi compared to overall total production cycles. With this approach, members exclude all other products made on their machines from their dues calculation.

Please indicate the total number of machines using the definition below and the average percentage of cycle that make concrete paving units on those machines. This information will be kept confidential and is not available to members. This information enables fair and accurate dues invoices. It is used to determine dues categories for the next ICPI **fiscal year beginning July 1, 2019**. Producer members with new machines are expected to declare them and begin paying dues in the quarter following commencement of paver production on their new equipment.

Declaration

STEP 1: List Number of Machines: _____ **(If more than 1 machine is listed, go directly to Step 3)**

Count all machines producing concrete paving units in excess of 5,000 psi compressive strength used in pavement applications. Machines that do not manufacture any concrete paving units in excess of 5,000 psi compressive strength used in pavement applications should not be counted.

STEP 2: If 1 (one) machine is listed above, please select annual estimated square foot production of concrete paving units:

- 1 machine producing under 1,000,000 sf/year
- 1 machine producing over 1,000,000 sf/year **(If this option is selected, please complete Step 3)**

STEP 3: If 1 machine producing over 1,000,000 sf/year, or on more than 1 machine, list average annual percentage of all cycles used to manufacture paving units:

INSTRUCTIONS FOR CALCULATING AVERAGE PRODUCTION RATIO

Calculate the ratio or percentage of concrete paving units produced compared to products manufactured on your company's machines overall. The ratio should be an average percentage, taking into account every machine that manufactures concrete paving units. The unit of measure to determine the ratio is the percentage of cycles per year on all machines producing concrete paving units in excess of 5,000 psi compressive strength. Percentage production on multiple machines shall be calculated by adding the production percentages for each machine then dividing by total number of machines. There is no production discount for one machine producing less than one million square feet per year.

Example: 3 machines
 Machine 1 = 75%
 Machine 2 = 77%
 Machine 3 = 20%
 Total = 172/3 = 57%

Honor Roll System: Please note that all companies will be recognized for completing this form via email and/or website listing.

I certify that I am a senior executive of our company and that the declaration calculation is accurate.

Title: _____ Name (printed): _____

Senior Executive Signature: _____ Date: _____

Please send a signed copy by fax to 703-657-6901 or scanned by email to cmcgrath@icpi.org by May 1, 2019. Thank You!

The Producer Dues Structure is a machine-based model that includes a production discount table based on the ratio of horizontal paving production cycles to total production cycles.

Dues Calculation

Step 1: Determine Number of Machines

Count all machines producing concrete paving units in excess of 5,000 psi compressive strength used in horizontal pavement applications. Machines that do not manufacture any concrete paving units in excess of 5,000 psi compressive strength used in horizontal pavement applications should not be counted.

Step 2: Determine Average Production Ratio

Calculate the ratio of concrete paving units produced compared to products manufactured on your company's machines overall. The ratio should be an average percentage, taking into account every machine that manufactures concrete pavers. The unit of measure to determine your ratio is the percentage of cycles per year on all machines producing concrete paving units in excess of 5,000 psi compressive strength used in horizontal pavement applications. Percentage production on multiple machines shall be calculated by adding the production percentages for each machine then dividing by total number of machines. There is no production discount for one machine producing less than one million square feet per year.

Example: 3 machines

Machine 1 = 75%
Machine 2 = 77%
Machine 3 = 20%
Total = $172/3 = 57\%$

For new producers that have not begun producing pavers, they may join at the minimum dues rate of \$5,015

Step 3: Find your dues from the table below.

First find the number of machines in the first column. Then, find the average production ratio in the first row. Your dues amount is listed in the box where the two variables (machines and average production) meet.

If over 50 machines, please contact ICPI for dues amount.

Avg. production of horizontal paving / machine					0-25%	26-50%	51-75%	76-100%
Horizontal paving production discount					9%	6%	3%	0%
# Machines	Sq. Ft. Paver Production	Base Price / Machine	Machine Multiplier	Adjusted Base Price / Machine	Tier 1	Tier 2	Tier 3	Tier 4
1	< 1M sq. ft.	\$5,015						
1	> 1M sq. ft.	\$6,685			\$6,085	\$6,285	\$6,485	\$6,685
2		\$13,370	0.85	\$11,370	\$10,345	\$10,685	\$11,025	\$11,370
